22 Crab Brook, Drainage	93151	93151

Vicinity of Crab Brook and North Drive, drainage improvements

Flooding of westbound Route 22 and adjacent Crab Brook in the vicinity of North Drive to Watchung Avenue occurs several times a year. The flooding results from inadequate hydraulic capacities of Crab Brook and Route 22 culverts. The improvements consist of deepening and widening the Crab Brook channel between North Drive and DuPont Street. Crab Brook will be cleaned downstream of DuPont Street. Additional inlets and larger culverts across Route 22 at three locations will provide hydraulic capacity necessary to convey runoff from the north side of Route 22 into Crab Brook.

New Jersey Department of Transportation Projects

<i>ROUTE/PROGRAM</i>	<i>Project ID No.</i>	<i>TIP No.</i>
22 Vosseller Avenue, Drainage	96028	96028

This project will provide for the installation of 350 feet of 18-inch diameter storm drain on both sides of Vosseller Avenue, from Cedarcrest Road to a detention basin to be constructed in the traffic island between westbound Route 22 and Ramp B. Additional inlets will be installed in Vosseller Avenue to pick up excess runoff and divert to the detention basin. A multistage outlet consisting of 8-inch low-level outlet pipe at the base and a raised concrete weir in a modified catch basin structure will be constructed to control basin outflows and water levels. The detention basin outlet will discharge into an 18-inch reinforced concrete pipe connected to the storm sewer crossing Route 22 which will discharge into the Vosseller Avenue Drain.
